

XSz 8 ... XSz 50

Solenoid actuated fail-safe safety valve

- 3/2-way
Port size: G1/4 ... G2,
1/4 ... 2 NPT
- Double valve control system,
inherently fail-safe without residual
pressure
- Dynamic self monitoring
- For use with pneumatic clutch and
brake systems and other 3-way safety
functions
- Fast exhaust capability
- Quick and easy
adjustment of 'overlap'
on mechanical presses
- Improves safety and reduces
downtime
- With the appropriate
application, performance
level „e“ (cat. 4) of
DIN EN ISO 13849-1 is achieved for
the safety function "Pressure
building up from '1' to '2' and pressure
dropping from '2' to '3'. DGUV and
other approvals
- No additional electrical monitoring
required
- XSz8 & XSz10 also
available with  'UL-recognized' solenoids

Technical features

Medium:

Compressed air, filtered $\leq 50 \mu\text{m}$,
lubricated or non-lubricated

Suitable oils:

Shell Tellus S2 MA 32,
ExxonMobil Febis K 32 or
comparable oil with
DVI values < 8 (DIN ISO 1817) and
ISO viscosity class 32-46
(DIN 51519)

Operating Pressure:

2 ... 10 bar (29 ... 145 psi)
For more details please see table
overleaf.

Mounting position:

Preferably upright with solenoids
on top

Ambient/Media temperature:

-10 ... +60°C (14 ... +140°F)
Air supply must be dry enough
to avoid ice formation at
temperatures below +2°C (+35°F)

Additional equipment:

Soft clutch module
- documentation no 5.14.320
Soft brake module
- documentation no 5.14.350

Safety silencer

- documentation no
5.14.525 and 5.14.550
Failure indication elements
- documentation no 5.14.420

Materials:

Body: aluminium
Seals: PUR, NBR

* To order please insert voltage requested for each valve. All solenoids are delivered without plugs.

*1) XSz 8 valves are delivered with silencer.

*2) Valves delivered with integrated silencer and without flange (R ports).

*3) With pressure balance Model 1028100.

*4) Valves delivered without silencer and with flange.

*5) With UL recognized solenoid (24VDC, other voltages on request)

XSz 50	0570275	0881400	0545005 (port A, G2, and pressure switches port G1/4)

*1) Pressure switch 0881400 is not usable when using magnet 3048 (UL).

Solenoids de-energized:

A port is exhausted. P port is closed, no connection from P to A. No residual pressure on port A as port A is freely exhausted through port R. No acting pressure on port A.

Solenoids energized:

Pilots are synchronously energised. Connection from port P to A. Working pressure on A. No passage from P to R. Dynamic self monitoring of both pilot systems, checking each other at each cycle for proper functioning.

Malfunction:

Pilots non-synchronously energised. Dynamic monitor notices failure operation and prevents the pistons from giving connection from P to A. Synchronously port A exhausts through R. No residual pressure remains in the system since P and A are not connected. The pilot line has lost the pressure and is locked.

1 (P) = Air pressure port / 2 (A) = Power port (clutch / brake) / 3 (R) = Exhaust

Norgren XSz Safety valves comply with the Category IV of DIN EN ISO 13849-1, if the operating system has been designed and realised according to Category IV.

Model: 0545005 (for position 3)

For external indication (e.g. visual, electrical or acoustic signal) of a malfunction, the installation of a failure indication element is recommended.

Such an element is not necessary to fulfil the safety function of the valve. (For further information please see the corresponding data sheet no. 5.14.420).

A suitable air treatment unit (dehydration, filtration, lubrication) must be connected upstream of pressure port 1(P). Lubrication can only be omitted if the connected consuming device and all additional equipment is suited for oil-free operation.

Degree of filtration: 50 µm. The lubrication should be adjusted to supply only enough oil to form a film on the valve spool and bore. Excessive lubrication may cause a build-up of oil in the pilot lines and cause sluggish operation of the valves. The size of pressure regulator, lubricator and filter must be consistent with the inlet port size. An accumulator tank is recommended between the pressure regulator and safety valve. The operating pressure must not drop below 2 bar and the use of a pressure switch is suggested. Safety valves must be installed as close as possible to the clutch and brake.

Caution: Non controllable elements such as quick exhaust valves, nozzles, non return valves, etc. must not be mounted between safety valve and clutch brake. It is the responsibility of the purchaser and/or

installer of the Norgren safety valves to make sure that the valve and all other components comply with all relevant national regulations and the specifications of the local safety associations.

The valves should be checked at intervals depending on the loads to which they are subjected, at least, however, once a year. The relevant tests must be carried out according to the corresponding operation and maintenance instructions of the unit and the local safety regulations. In case of malfunctions the unit has to be tested and/or replaced immediately. Repairs and maintenance must only be carried out by the after-sales service of the valve manufacturer or by a qualified engineer trained by the valve manufacturer. Important for use at presses: The combination with the electrical press control must meet the DIN EN ISO 13849-1 requirements. If two separate valves are used to control the clutch and brake, please observe data sheet no. 5.14.420.

All liability is denied for unauthorised modification of the units, installation or usage not in accordance with the manual, the local safety requirements and the principles of DIN EN ISO 13849-1.

Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under »**Technical features/data**«. Before using these products with fluids other than those specified, for non-industrial applications, life-support systems or other applications not within published specifications, consult Norgren.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes.

The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.
